

UNIPLEX 160
DI-N-BUTYL ADIPATE
CAS NO. 105-99-7

Uniplex 160 is a safe, effective plasticizer for imparting low temperature flexibility to various polymers, with a good balance of solvation and low temperature properties. It has excellent compatibility with cellulose acetate butyrate, cellulose nitrate, vinyl acetate, vinyl chloride, and vinyl chloride acetate.

Uniplex 160 is suggested as a solvent/plasticizer in fingernail enamel, nail enamel remover, hair sprays, adhesives, and coatings. It is particularly recommended for plasticizing resinous and polymeric coatings.

SPECIFICATIONS:

Appearance	Clear liquid, no suspended material
Assay, as Di-n-Butyl Adipate	99.0 % minimum
Color (APHA)	25 maximum
Water Content, Karl Fischer	0.1% maximum
Acidity,% as Adipic Acid	0.02 maximum

HANDLING INFORMATION:

Refer to Material Safety Data Sheet

These suggestions and data are based on information we believe to be reliable.
